SIS Announces Free Evaluation Version of Accuracy Analyst™

Starkville, Miss., 9 September 2010 -- Spatial Information Solutions, Inc. (SIS), announces the availability of a free evaluation version of its flagship software product, Accuracy Analyst™. “Because this tool automatically and quickly executes accuracy verification procedures and documentation that have typically taken five days to do manually, we found people really have to see it to believe it,” said company president Charles O’Hara. “The free evaluation version will give people in the mapping community an opportunity to see the tool work on their own data so they can assess its value to them, whether they are the photogrammetrists verifying their products before delivery, users checking data before making maps from orthophotos, or agencies needing a reliable way to assure that deliverables meet their specifications.”

The free evaluation version makes data access and new capabilities in version 2.3 of the software available, but limits the number of checkpoints as well as analytics and report generation capabilities. The free evaluation version is active for thirty (30) days. At the end of the trial period, the user is invited to purchase a licensed version of the software.

Registration for the free evaluation version is accessed at <http://www.spatialis.com/about/reglist.php>. The evaluation version will be sent on CD with demo data and instructions for using the tool so please provide full address information. An installation guide, user guide and other supporting documents as well as a ‘Buy Now’ page for easy on-line purchase of the fully-functioning ‘New’ version 2.3 of Accuracy Analyst are available at <http://spatialis.com/products/accuracy/>. A five-and-a-half minute video “Getting Started with Accuracy Analyst” is also available: <http://www.youtube.com/watch?v=Ack8W6sCUKw>.

About Spatial Information Solutions, Inc.

Spatial Information Solutions, Inc. (SIS), of Starkville, Mississippi, was formed in 2006 as a spin-off company from Mississippi State University. Through its flagship product, Accuracy Analyst™ version 2.3, SIS provides software-based map accuracy and content enhancement solutions that enable its customers to map with confidence.
